

LAUNCHLOCK

SECURE NOW, LAUNCH LATER

NOW MANIFESTING TO LEO, GTO, AND LUNAR DESTINATIONS

SEOPS' LaunchLock transforms satellite launch planning by offering flexible launch windows instead of fixed dates. This program provides an 18-month launch window, ensuring the customer's flexibility to accommodate their mission objective.

SEOPS LaunchLock includes four distinct offerings based on the target destination:

1. **LaunchLock LEO:** Secure your place in Low Earth Orbit, ideal for a variety of satellite missions.
2. **LaunchLock GTO:** Reach cislunar orbits on a regular cadence of flights with the same scheduling flexibility as LEO.
3. **LaunchLock Lunar:** Get early access to lunar destinations powered by industry-leading lunar partners.
4. **LaunchLock Hopper:** Cost-effective satellite rideshare for educational and non-profit organizations, offering flexible launch dates and reduced rates.

Three W's of LaunchLock

WHEN:

Specify your target launch within an 18-month window

WHERE:

Indicate your target orbit

WHAT:

Describe your payload and mission objectives

THEN...

Lock in your launch window.

The SEOPS Difference:

LaunchLock. Our exclusive rideshare process provides customized mission planning, early access to the SEOPS integration team, and an 18-month Launch Window – resulting in reduced risk and mission success.

Groundbreaking Access. SEOPS provides more rideshare destinations than any integration partner in the industry.

Customer Focused. No other rideshare/integration team keeps customers in the driver's seat like SEOPS.

Experience. Top-notch team, trusted around the world by industry and government alike.
